EDUCATION

Instituto Superior Técnico

Bachelor of Computer Science and Engineering

Lisbon, Portugal

Sept 2024 – June 2027

- Relevant Coursework: Data Structures and Algorithms, Operating Systems, Object-Oriented Programming.

EXPERIENCE

Promptly Health

Software Engineer Intern

Remote

Sept 2025 – Dec 2025

- Architected and managed the lifecycle of 6+ AWS RDS services inside the Kubernetes Cluster using Crossplane.
- Implemented a Go templating function, improving readability and reducing infrastructure complexity by 20%.
- Improved security by 100% by moving AWS ElastiCache credentials into multiple Kubernetes Secrets.
- Enabled multi-environment support, improving deployment scalability and reducing duplication.

Noesis

Software Engineer Intern

Remote

July 2025 – Sept 2025

- Engineered a N8N Workflow that generates cybersecurity reports, saving 2+ weeks annually for 15+ engineers.
- Optimized workflow efficiency by implementing asynchronous parallel execution, reducing runtime by 67.2%.
- Built Python/JavaScript scripts that generate adaptable graphs, eliminating the costs of using external APIs.
- Developed multiple automation scripts to make scheduled queries to an Elasticsearch, which eliminated manual input and reduced queries by 66.6%.

Junitec

Software Engineer

Lisbon, Portugal

Feb 2025 – Sept 2025

- Worked alongside top engineers at Europe's Best Junior Enterprise, generating over €200k in annual revenue.
- Developed real-time collaboration features using WebSockets in Go, reducing manual paperwork by 60%.
- Wrote backend logic in Go for SQLite integration, streamlining the management of 20k+ stock items.
- Engineered a full-stack inventory management with a React.js interface and a Go backend, containerizing the project with Docker, which streamlined operations for a non-profit supporting 40+ abandoned children annually.

PROJECTS

JustAQuote | *Java, Spring Boot, Redis, PostgreSQL, Docker*

- Designed and implemented a REST API using Spring Boot, enabling scalable delivery of daily motivational quote.
- Optimized API performance with Redis caching, reducing response latency from 360ms to 5ms.
- Engineered the database schema using PostgreSQL and containerized the services with Docker.

GemSolver | *JavaScript, Node.js, Gemini API*

- Engineered an AI-powered tool with Node.js and Gemini API, reducing search time by 75%.
- Processed 200+ screenshots in one semester, automating study workflow and contributing to a top 1% grade.

Library Management System | *Java, Design Patterns*

- Architected a Management System that ensures 100% abstraction of business logic by leveraging decoupled code.
- Implemented Strategy, Observer, Command, and Visitor patterns, reducing feature integration time by 40%.
- Developed exception handling for 10+ workflows preventing invalid operations and ensuring no runtime errors.

TECHNICAL SKILLS

Languages: Python, Java, Go (Golang), SQL, C/C++, TypeScript/JavaScript, HTML/CSS.

Frameworks: PostgreSQL, Spring Boot, Redis, REST APIs, SQLite, Elasticsearch, Node.js, React.js.

Developer Tools: Git, Docker, AWS, Kubernetes, Crossplane, ArgoCD, Postman, Neovim, Unix/Linux.

Certifications: AWS Cloud Essentials, IBM Full-Stack JavaScript Developer, City's Best High School Student.
